

Vencobelt

Egg conveyor belt

Using the Vencobelt, eggs from different nest rows or houses can be transported to a central collection area. The conveyor system is designed for gentle handling of both hatching and table eggs. With its durable plastic egg carriers and one-chain system Vencobelt can easily be adapted to all circumstances. The design of the carriers and the smooth connections allow a conveyor slope of up to 28 degrees and corners up to 180 degrees.

Egg friendly system

Unique carrier design

Gentle egg transfer and take-over

Flexible solution with many applications

Short turns possible with one-chain system

Carrier design makes 28 degree slopes possible

Connectable to several nest or system rows

Low maintenance level

Self-maintenance with oil lubrication system

Only one drive chain in the system

Up to 100 meters with only 1 motor

Technical Specifications

Outside Dimensions
(Width x height)

415 mm x 170 mm

Capacity

Max. 26.000 eggs/hour

Belt speed

Variable or fixed (\pm 4 m/min.)
